ACADEMIC PROJECTS

- **Project Name: Job Sphere – Job seeking Application** | Project Members: 3 | Domain: Web Development

  My Role: As a MERN Stack Developer for JobSphere, I used React to create responsive front-end interfaces and Node.js to manage server-side operations. MongoDB was responsible for data storage, while Express.js enabled efficient routing. My emphasis was on leveraging these technologies to build a scalable and secure job-seeking application.

  Technologies: React, HTML, CSS, JavaScript, MongoDB, Nodejs, Express.js, API

- **Project Name: Wanderlust Website** | Domain: Web Development

  My Role: As a Full-Stack Developer for the Wanderlust Website, I constructed a dynamic Airbnb-like platform using HTML, CSS, and JavaScript for the front-end. I implemented server-side functionality with Node.js and Express.js, and managed data storage with MongoDB. JSX was used to create responsive, scalable components.

  Technologies: HTML, CSS, JavaScript, MongoDB, Nodejs, Express.js, API, JSX
